

GOOD RELATIVE HUMIDITY CONTROL IMPROVES ANIMAL HEALTH

European convention for the protection of vertebrate animals used for experimental and other scientific purposes, ETS 123

Decrease in bar width indicates decrease in effect

The European convention for the protection of vertebrate animals used for experimental and other scientific purposes, ETS 123 specifies a relative humidity of 55% ±10 inside cages for rodents.

Especially during the winter, it can be a real challenge to meet these guidelines and it might affect the health of the animals as well as the quality of your research.

ScanClime is an air handling unit that gives you a very accurate, flexible and affordable control of the relative air humidity. Are you curious to know how you can use ScanClime to optimize, monitor and document the environment inside your IVCs and ScanTainers?
