

# DOWNFLOW Module

Ideal as:

- Buffer storage
- Cage preparation area
- Sterile area

# DOWNFLOW

## Module

### Keep the clean equipment clean until you need it.

The downflow module allows you to create a sterile zone tailor-made to your requirements. You decide how large you want the sterile zone to be. We join the modules on-site. A quick, easy and cost efficient solution! Can you afford not to ....?

### Ideal as:

- Buffer storage for autoclaved equipment (cages, lids, tops, bottles, etc.)
- Cage preparation area for dispensing of bedding, diet, enrichment and water
- Sterile corridor from the autoclave to e.g. preparation area, cage change area, etc.

The downflow module is a fully re-circulating unit providing HEPA filtered laminar air flow.

It is designed to protect equipment and procedures from contamination from the environment.

The unit operates at positive pressure.
