

THE TRIPLE-IMMUNODEFICIENT SRG RAT

The SRG rat is the first **triple-immunodeficient rat model** validated for xenograft studies in oncology and infectious disease research.

The severe immunodeficiency, together with its size, makes it the ideal model for many preclinical applications. Learn more about how the **SRG** can benefit your specific project.

Join **webinar** *“In Vivo Modeling of Breast Cancer Dissemination with the SRG Rat”* on 28 February. **Sign up now.**
