

Field Service Technician

SCANBUR is well established in the market for Life Science. We are looking for an experienced Field Service Technician to join our UK team.

As a Service Technician, you will be a key person for our customers and your colleagues, working closely with our two Sales Managers in the UK and the rest of the Sales and Service team in Denmark.

Your job is mainly to:

- Perform acute as well as preventive service at customers' premises
- Install new equipment, including function testing and formal transfer
- Train and educate customers in the use of the equipment
- Assisting our service teams in Central Europe on an ad hoc basis

Extensive travelling in the UK must be expected. Ideally, you are based in the Midlands, but this is not a criterion.

Skills:

We are looking for an experienced Technician, Electrical Engineer or similar background who is very customer friendly, flexible and effective, thriving in a busy and complex environment. You must be a self-starter with a strong sense of responsibility and the ability to cooperate. At the same time, you must be able and willing to work independently. In this role, you need to be communicative, trustworthy and thorough yet effective. You can communicate technical issues with customers and colleagues in an easily understandable manner.

We offer:

You are offered a challenging job in a good working environment and with a competitive salary matching your qualifications and experience. You will be trained in our products and service procedures and become part of a dynamic team with a strong team spirit in an existing international setting. We aim to be innovative and drive sales to prove the highest value for our customers.

Company:

SCANBUR A/S is a company in growth, with our headquarters located south of Copenhagen, in Karlslunde, Denmark. We have sales offices in Sweden and Norway, and sales representatives in the UK, Germany and Finland. SCANBUR is a trading company going back to 1961, with 50 employees engaged in the Life Science industry. We develop, produce and sell equipment and consumables to research laboratories.
