

# GREEN FOOTPRINT CONTRIBUTION

## SCANCLIME CONSIDERABLY REDUCES CO<sub>2</sub> EMISSION

ScanClime replaces humidification at room level and contributes to a significant reduction of your CO<sub>2</sub> footprint.

**In a 600 m<sup>2</sup> animal room with 4000 cages, a ScanClime introduction will mean a reduction in CO<sub>2</sub> emission with up to 300 tons/year - this equals what 30 average households emit in one year!**

ScanClime is an air handling unit developed to control the relative humidity very accurately at cage level in IVC's and Scantainers in line with the legal requirement of 45-65%.

By changing the concept of air handling and humidification directly to cage level, you actively choose to contribute to a greener, better future. Get in touch and let's talk!
